Office Action Summary

Art Unit: 2774

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

2. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Kameyama et al (US Patent No. 5,959,61<sup>4</sup>).<sub>X</sub>

As to claim 1, Kameyama discloses a method of driving a surface discharge plasma panel having a first substrate (21) and a second substrate(28) space apart and facing each other, and common electrodes (2), scan electrodes (11), and address electrodes (13) arranged between the first and second substrates, the common electrodes (12) being arranged in parallel with the scan electrodes (11), the address electrodes (13) being arranged orthogonal to the common electrodes and the scan electrodes to form respective intersections which each define a corresponding pixel, comprising: a resetting step (e.g. RESET PERIOD of Fig. 5) of applying a first voltage between the scan electrodes and the address electrodes to accumulate wall charges in the respective pixel by a facing discharge, and removing the wall-charges accumulated by the facing discharge; an addressing step (e.g. ADDRESSING PERIOD of Fig. 5) of applying a second voltage between a corresponding scan electrodes and second address electrodes so that a facing discharge occurs, to form wall-charges in the selected pixels; and a sustained discharging step (e.g. SUSTAINING

Art Unit: 2774

DISCHARGE PERIOD of Fig. 5) of applying a third alternating-current voltage between the scan electrodes and common electrodes so that a surface discharge occurs in the selected pixels.

3. Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The US Patents 5,247,288 and 5,446,344 are cited to teach a method of driving plasma panel display including a reset, addressing and sustaining steps.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Xiao Wu whose telephone number is (703) 305-4721. The examiner can normally be reached on Monday to Friday from 8:00 am to 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Hjerpe, can be reached on (703) 305-4709.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305-3900.
